ABELDent Pay

Integrated Payment Card Processing

Payment Card Processing Integration for ABEL Customers

ABELDent Pay automatically enters your patients' credit/debit card payment transaction information directly into the Point of Sale (POS) payment terminal so that you don't have to!

ABELDent Pay simplifies payment processing to reduce manual entry and errors, save time and make financial tasks such as bank deposit reconciliation more efficient.

How does it work?

1. ABELDent user enters payment information including the card type (Visa, MasterCard, Debit etc.) that will be used by the patient on the payment screen.
2. ABELDent Pay identifies the payment type (debit or credit) and amount from the information you enter in your ABELDent program and sends it to the POS terminal.
3. The patient or the ABELDent user taps/inserts the payment card into the POS terminal.
4. Once the transaction is approved, it appears in the Patient Ledger and the approval number is printed on the Patient Receipt.

What's in it for you?

1. No more transcription errors.
2. Time savings by eliminating double entry.
3. Easier day end/month end bank deposit reconciliation.
4. Keeps you up-to-date with Payment Compliance Industry standards for maximum security.
5. Potential rate savings for ABELDent users.
6. A Special Offer from nuvei – receive up to 3 free terminals depending on processing volume.

ABELDent Inc. and nuvei partnered to develop an integrated payment processing module that will streamline payment entries in your office.
